### **Maintenance of Highway 3**

Mr. Speaker, my questions are for the Minister of Infrastructure. Highway 3 is in poor condition because of dips, potholes and loose gravel, causing frequent vehicle damage. Can the Minister tell this House what formula his department uses to calculate capital spending on Highway 3; and

1. if the formulas for capital spending and maintenance standards are applied to every NWT highway;
2. if these formulas take into account special circumstances such as accelerated permafrost degradation;
3. what the Department's long-term spending plan is for Highway 3 and if it can it be tabled in the House; and
4. what criteria are used to decide where and how road hazards are marked to alert travellers on Highway 3?
